

SUMMARY

AI Software Engineer with 4+ years of experience developing scalable applications using Java, Spring Boot, Hibernate, Python, Django, and Node.js for backend, with React.js and Vue.js for frontend solutions. Skilled in building microservices, REST/GraphQL APIs, and cloud-native deployments on AWS with Docker, Kubernetes, and CI/CD pipelines. Experienced in implementing AI solutions, including LLMs, multilingual NLP assistants, and RAG-based retrieval pipelines to enhance data accessibility, user personalization, and operational efficiency.

EXPERIENCE

Wayfair, USA | AI Software Engineer

Jul 2024 – Present

- Developed and maintained microservices for e-commerce order processing and inventory management using Java, Spring Boot, and Hibernate, handling over 850,000 daily orders while ensuring sub-200ms response latency and compliance with internal audit standards.
- Built LLM-powered recommendation pipelines using LangChain and Hugging Face Transformers, processing 2M+ product interactions daily to provide personalized shopping suggestions, increasing user engagement and cart conversion rates across multiple Wayfair regions.
- Designed GraphQL APIs for customer account aggregation and order tracking, consolidating purchase history and shipment data for 500K+ daily users, enabling real-time dashboards for supply chain and logistics teams.
- Implemented analytics pipelines with Elasticsearch and Kibana, allowing operations managers to query 1M+ daily order transactions and reduce report generation time from hours to under 25 minutes.
- Orchestrated CI/CD workflows with GitHub Actions, Docker, and Kubernetes, automating deployments for microservices and improving release velocity to 18+ production updates per month.
- Engineered AWS-hosted services using EKS, Lambda, and CloudWatch, achieving 99.97% uptime, reducing mean time to detection for system anomalies to under 4 minutes, and ensuring scalability during peak sale events.
- Optimized PostgreSQL database queries and implemented Redis caching, improving response times for high-traffic endpoints and enabling retrieval of 750K+ daily user sessions efficiently.

Accenture, India | Software Engineer

July 2020 – December 2022

- Architected and deployed full-stack financial applications using Python, Django, and React, handling over 75,000 daily transactions, enabling finance teams to automate loan approvals and payment processing with secure user authentication.
- Led migration of legacy Oracle databases to PostgreSQL, restructuring over 1.2 million historical client records while improving query efficiency and enabling real-time reporting for risk assessment dashboards.
- Established Node.js microservices with REST APIs to process 60,000+ daily financial requests, integrating with external payment gateways and internal ERP modules, reducing manual reconciliation by 2x.
- Constructed real-time dashboards using Vue.js to monitor loan disbursements, credit exposure, and transaction anomalies across 25+ branches, improving branch manager decision-making and operational efficiency.
- Containerized Python/Django applications with Docker and Kubernetes, automating CI/CD pipelines and ensuring high availability.
- Integrated Apache Kafka for streaming, processing 50,000+ records/hour, enabling instant updates for risk scoring and compliance monitoring.
- Applied role-based access control and audit logging across financial applications, tracking 120,000+ user actions per month and ensuring regulatory compliance with internal governance standards.
- Improved cloud infrastructure on AWS, scaling backend services and PostgreSQL instances to handle spikes of 15,000+ simultaneous requests, improving overall system performance and reliability.

KEY PROJECTS

Generative AI-Powered Customer Support Assistant

Tech Stacks: AI | Java | Spring Boot | Hibernate | LLM | NLP | RAG Pipelines

- Formed a customer support assistant using Spring Boot, Hibernate, LangChain, and GPT-4, integrating NLP pipelines and RAG workflows to retrieve answers from 25,000+ internal documents, reducing query resolution time from 12 minutes to 2 minutes.
- Carried out multilingual translation and sentiment analysis using MarianMT and Hugging Face models, enabling the system to handle 10,000+ daily user interactions across English, Spanish, and French, improving response consistency and accessibility.
- Devised backend microservices with Java, Spring Boot, and PostgreSQL, supporting real-time query processing and tracking 15,000+ simultaneous chat sessions, allowing support teams to scale operations efficiently.

AI-Powered Loan Risk Prediction and Monitoring System

Tech Stacks: AI | Node.js | React | Vue.js | PyTorch | NLP | SQL | Cloud

- Formulated machine learning models using Python and PyTorch to predict high-risk loan accounts, analyzing 80,000+ customer financial records and reducing manual review time from 5 hours to 50 minutes per batch.
- Programmed NLP pipelines with Hugging Face Transformers and spaCy to extract insights from unstructured loan applications and supporting financial documents, producing actionable matrices for risk and compliance teams.
- Executed full-stack monitoring dashboards with React, Vue.js, and Node.js, connected to PostgreSQL and cloud services, enabling finance teams to visualize real-time transaction anomalies and prevent potential losses across 40+ branches.

SKILLS

AI & LLM: LangChain, OpenAI API, Hugging Face Transformers, GPT, BERT, RAG workflows, Prompt Engineering**Programming Languages:** Python, SQL, TypeScript, JavaScript, Java, C++, Shell Scripting**Data & Databases:** MySQL, PostgreSQL, MongoDB, Redis, DynamoDB, Cassandra, Firebase, Snowflake**Backend Development:** Node.js, Express, FastAPI, Django, Flask, Spring Boot, GraphQL, Hibernate**Frontend Development:** React, Next.js, Redux Toolkit, React Native, Tailwind CSS, Material UI, Vue.js, Angular**Cloud & DevOps:** AWS (EC2, S3, Lambda, RDS, CloudWatch), Azure, Docker, Kubernetes, GitHub Actions, GitLab CI/CD, Jenkins, Terraform**Testing & QA:** Jest, Mocha, Cypress, Selenium, JUnit, Postman, PyTest**Monitoring & Logging:** Prometheus, Grafana, ELK Stack, Datadog

EDUCATION

Master of Science in Data Science | University at Buffalo, State University of New York, Buffalo, NY
